

Install the Jana2020 integration

Simple Windows x64 installation guide

Before you start: Jana2020 must already be installed. This guide uses the Phase Studio 1.0.9 Jana2020 installer shown in the accompanying recording.

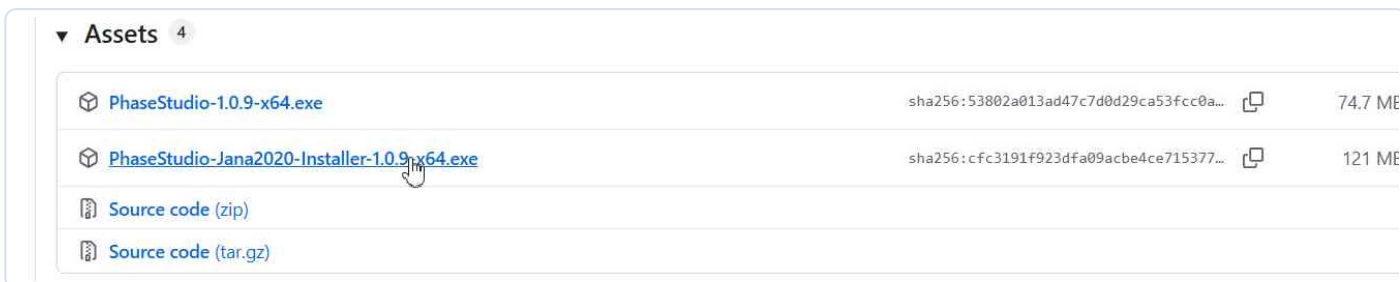

1 Open the Phase Studio download page

On the SharpED website, find the Try Phase Studio card and click Open on GitHub. On GitHub, open the latest Phase Studio release.

2 Download the Jana2020 installer

Under Assets, choose PhaseStudio-Jana2020-Installer-1.0.9-x64.exe. Save the file, then open the downloaded .exe file.

NOTE Choose the Jana2020 installer, not the standalone PhaseStudio-1.0.9-x64.exe package.

Useful links

SharpED website <https://sharped.fzu.cz/>

Phase Studio on GitHub <https://github.com/ji-ze/Phase-Studio>

Use the website for project information and GitHub for releases and downloads.

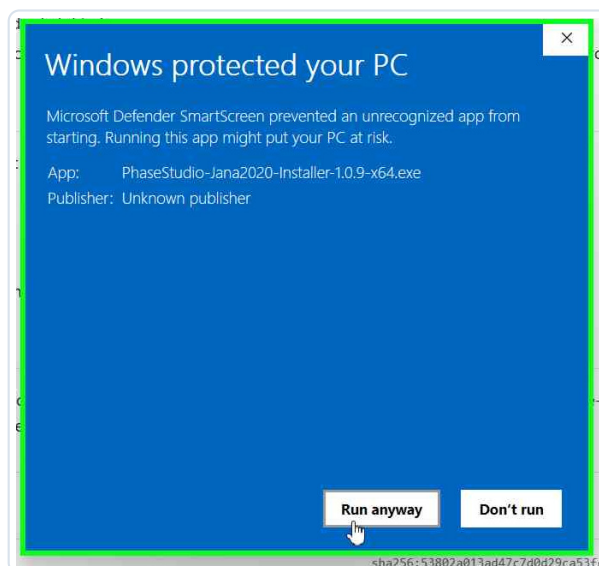

Run the installer

The SmartScreen prompt may appear on first launch

3

Confirm Windows SmartScreen if it appears

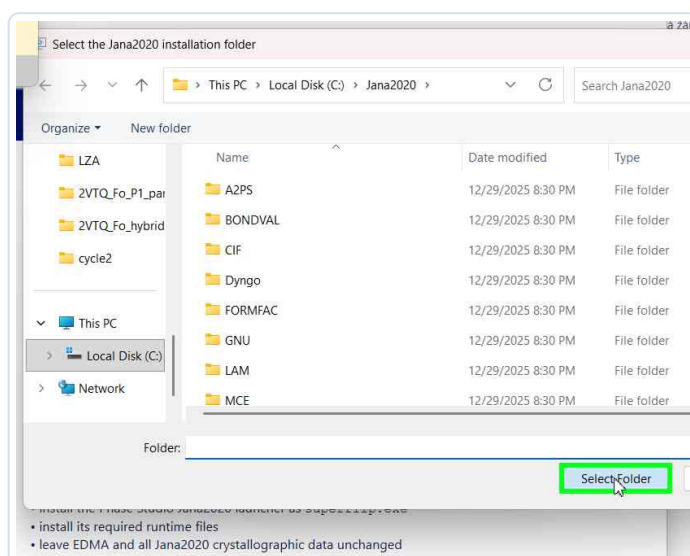

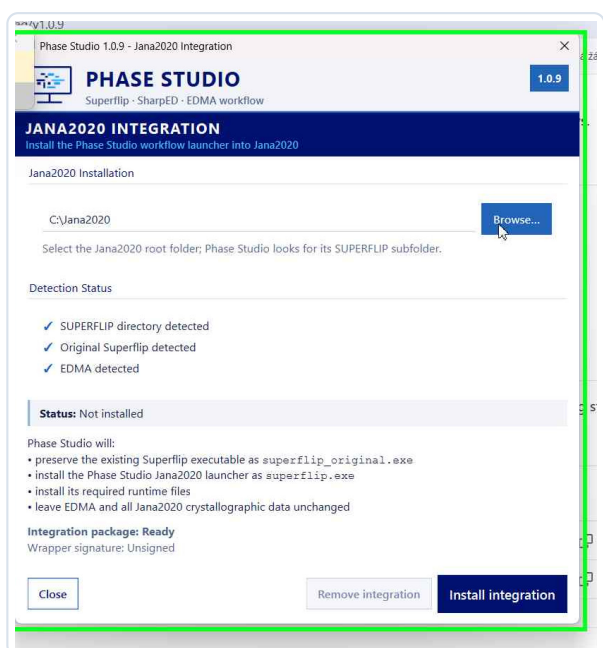

If Windows shows “Windows protected your PC”, first click More info, then click Run anyway to start the installer.

4

Select your Jana2020 installation folder

In the Phase Studio - Jana2020 Integration window, click Browse... and select the Jana2020 root folder. For a default installation this may be C:\Jana2020. Then click Select Folder.

NOTE Select the Jana2020 root folder - do not select the SUPERFLIP subfolder directly.

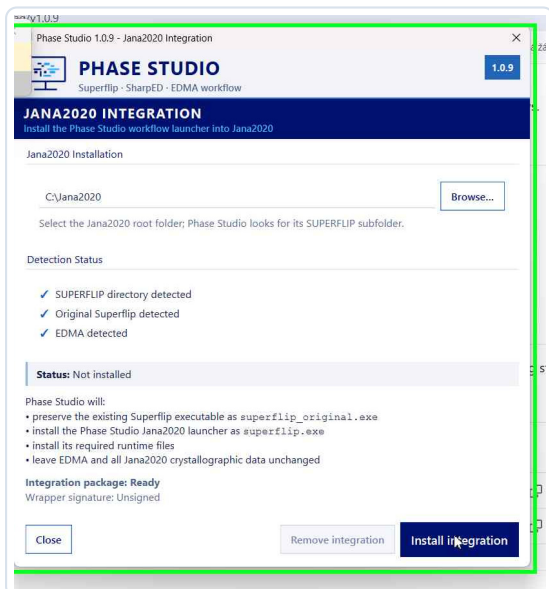

Install and finish

Check the detected components before installing

5

Install the integration

Confirm that the installer detects the SUPERFLIP directory, the original Superflip executable and EDMA. Click Install integration.

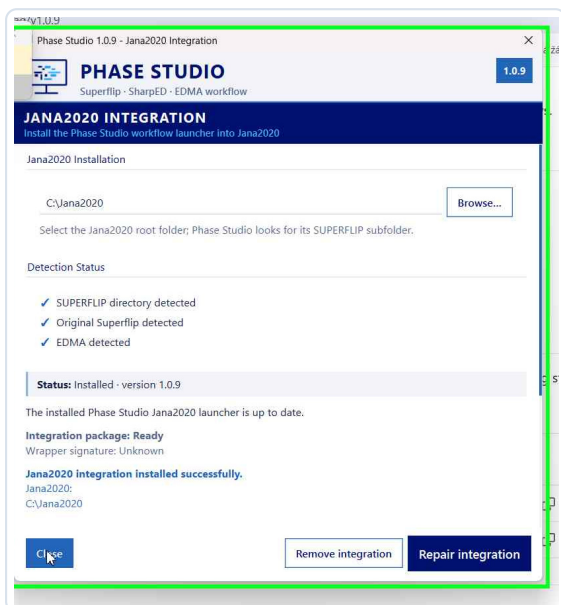

NOTE If Phase Studio is already installed, the button may be shown as Repair integration instead.

6

Check the success message and close

Installation is complete when the status shows Installed and the window says “Jana2020 integration installed successfully.” Click Close.

Done - Phase Studio is now integrated with Jana2020.

You can now close the installer and continue in Jana2020.
